

Ansible Documentation

Readthedocs

Simple as that: <https://docs.ansible.com/ansible/latest/>

Network device management modules are out of core ansible - in ansible [galaxy](#):

- NX-OS: <https://galaxy.ansible.com/cisco/nxos>
- IOS(-XE): <https://galaxy.ansible.com/cisco/ios>
- Everything "Cisco": [Search in galaxy](#)

Deeper into NX-OS galaxy page You'll see a list of modules starting with [cisco.nxos.nxos_aaa_server](#).

We'll review some module examples in later chapter, but for documentation understanding purposes take a look at module [cisco.nxos.nxos_vlans](#):

- Review *Parameters* table.
- Try to compare it to *Examples*.

ansible-doc

Ansible docs provide the same information in a terminal window readable mode.

Run `ansible-doc cisco.nxos.vlans` and compare the output to what You see in online documentation.
